HD-TC SERIES
Laser Tube Cutting

- Easy To Use
- High Quality Cutting
- Low Energy Consumption
- Faster
- Efficient
- Winning
- Ergonomic
As a total supplier for sheet metal manufacturing with almost 60 years of experience, Durma understands and recognizes the challenges, requirements and expectations of the industry. We strive to satisfy the ever higher demands of our customers by continuously improving our products and processes while researching and implementing the latest technologies.

In our three production plants with a total of 150,000 m², we dedicate 1,000 employees to delivering high quality manufacturing solutions at the best performance-to-price ratio in the market.

From the innovations developed at our Research & Development Center to the technical support given by our worldwide distributors, we all have one common mission: to be your preferred partner.

Present Durmazlar machines with DURMA name to the world.
HD-TC
LASER TUBE CUTTING

Laser tube cutting is specifically designed for businesses that care about high quality tube (max Diameter 170 mm) and profile (max Square 120 mm and Rectangle 100 x 150 mm) cutting. Using a laser cutting power of up to 3 kW, pipes and profile materials of thicknesses from 0.8 mm to 8 mm are cut. Full automatic Loading and Unloading requires less effort and time save for the operator.

The moving axes operate via maintenance-free, dynamic and high-performance AC servo motors. Suction system is used to vacuum the dust generated during laser cutting to the dust collection filter. Automatic pipe and profile loading system is designed in accordance with the principle of reducing the material preparation time and automatic pipe and profile unloading system to collect the cut materials without stopping the machine. Thanks to the compact layout of the machine, all pipe and profile loading / cutting / unloading actions are performed with less space and less processing.

HD-TC Lasers make differences with speed, high quality components, efficiency and industrial design.
The laser power is controlled as a function of the path, velocity, time and travel.

Close-loop working.

Optionel functions.

6 MB expanded user memory, external memory option.

Advanced optimisation: tools optimisation.

Fast tool way collision protection. Toolway optimisation to prevent damage from possible deformed material.

Writings supported by your operating system can be applied directly on the material to be cut.

Cutting direction, clockwise or opposite is supported.

Advanced corner applications provide perfect corners and soft cutting.

Fillets, cooling, slowing down, circulation.

Shared Cuttings: This function is especially useful for thick plates and reduces the need of marking holes during cutting

Automatic entry point

Fully automatic cutting

Z-Axis control

The Sinumerik 840DSL CNC controller is an efficient 64-bit microprocessor system with an integrated PC. The controller has a Dürra operator interface and a complete cutting database for all standard pipes cutting applications.

The database includes the cutting parameters for standard tubes and profiles (steel, stainless steel, aluminium) for common thickness ranges. Based on these reference values the operator can easily improve the cutting quality for different types of materials.

Rack and Pinion Motion System (HD-F Series)

Axes motions achieved by rack and pinion design. There are low backlash gears between the motor and the pinion which otherwise could cause precision losses. High precision two-day, hardened helical racks with low clearance make it possible to achieve very high acceleration (10 m/s²), speed (100 m/min) and accuracy (0.05 mm) values.

CAD/CAM Software

The laser power is controlled as a function of the path, velocity, time and travel.

Close-loop working.

Optionel functions.

6 MB expanded user memory, external memory option.

Advanced corner applications provide perfect corners and soft cutting.

Fillets, cooling, slowing down, circulation.

Shared Cuttings: This function is especially useful for thick plates and reduces the need of marking holes during cutting

Automatic entry point

Fully automatic cutting

Z-Axis control

The cooler is a device that provides cooling of the laser power source, optics in the cutting head. It has a water based cooling system.

Thanks to the dual circuit system, cooling water is sent at different temperatures, which are needed for optics and laser power supply.

Filter

It provides a healthy working environment by absorbing smoke, dust and small particles formed during cutting. The vibrating dust collection filter is fully automatic. It runs automatically when cutting is started.

Filter cartridges are a compact unit with integrated fan motor assembly and jet-pulse (back blow) cleaning system.

Low Operating Costs

- Low energy consumption
- Low cost per component
- Optimised focal distance for all thickness values
- Maintenance free operation
- Compact design, fast installation
- Rigid body structure, high durability

**LIGHTCUTTER 2.0 MOTORIZED**

**THE NEW GENERATION OF EFFICIENT CUTTING HEADS**

Whether for flatbed or bevel cutting systems: The cutting head LightCutter 2.0 is the perfect solution for efficient and cost-effective laser cutting. The new generation of our Light Cutter family is designed for cutting applications in the medium power range up to 4 kW and is characterized by a high cutting quality for all metals—especially mild steel, stainless steel, and aluminum.

Thanks to an automated motor-driven adjustment of the axial focus position, the cutting head works precise and stable at all times, even at accelerations of up to 3g. The display of the set focus position on the front of the cutting head makes commissioning much easier. The LightCutter 2.0 Motorized covers a large focus position range of 23 mm.

The flexible cutting head is available in 2D and 3D versions: While the 2D version is suitable for integration in flatbed and simple tube and profile cutting systems, the 3D version is ideal for use in professional tube and profile cutting systems as well as in demanding free-form applications. The narrow contour of the 3D cutting head’s lower section enables even complex cuts on tubes, profiles, and free-form parts without inclination angle of up to 45 degrees.

**EFFICIENT & STABLE**

- Excellent value for Money
- Very high cutting speed and optimal edge quality
- Sealed beam path
- Temperature and plasma—resistant distance control

**USER FRIENDLY**

- Simple setting of focal position in lateral / vertical direction
- Rapid changing of protective glass cartridge (no tools required)
- Additional protective glass in collimation module
- Slim and sturdy design

**FLEXIBLE**

- Customized configurations for all applications
- Straight or angled versions
- Different fiber plugs (QBH, D, etc.)
- Motorized or manual focus adjustment

  - up to 4 kW
Auto Loading System
Profiles taken from bundle one by one to the chain, system moves the profile up and grippers clamps the profile and move it to the chuck axis and chuck holds the profile.

Automatic Loading Gripper System
Tubes which come from loading unit are transferred to cutting zone and centered automatically.

Tube Transfer System
Tube transfer system ensures that tubes are taken to cutting line with right position.

Chain Transfer System
Chain transfer system is used with the principle of loading stainless steel, aluminium, brass, etc. tubes without stretching.

Hydraulic Profile Holder
It can hold variety of profiles by 4 clamps working independently as 2+2. Adjust hydraulic pressure automatically according to profile material thickness.

Measuring Profile Length
With servo motor on it measures profile length and send the data to the system.

Z Axis
Z axis allows faster cutting process with its high dynamic performance. Laser head with automatic focusing eliminates time loss in the preparation phase before cutting.

Profile Support System
4 pieces support arms with servo motors obtain the loading to be the same level with hydraulic chuck. As hydraulic chuck move forward the profile at X1 axis, supports arms close down one by one to open the front of hydraulic chuck.
To get cutting pression, centers the profile as close as possible to cutting head. Driver turn synchronized with chuck. 4 independent clamps come to position automatically before profile comes.

**Centering Chuck Tube**

**Tube Centering Mechanism**

Tubes centering mechanism which is on the first support takes tubes to the chuck axis.

**Seam Detection Sensor**

The Seam Detection sensor attached to the HDTC machines detects the stitched surface when the pipe is loaded on the machine and provides the ability to rotate the operator’s cut holes at any angle.

**Centering System with Laser Sensors**

With the newly added laser sensor centering option added to the HDTC machines, it is possible to control the size and irregular structure of the profile during cutting or before cutting with the help of sensors to ensure that the internal contours to be cut are at the right point.

**Spatter Protection System**

The Spatter Protection system is used to prevent the slag coming out at the cutting edge from sticking to the opposite surface of the profile. The burrs adhering to the inner surface of the profile disrupt both the cutting quality and cause some cleaning of the inner surface of the work pieces. All these problems can be prevented by Spatter Protection system.

**Automatic Unloading System**

Unloading unit support mechanism height controlled by servo motor and keep supporting profile during cutting.

- 4 m and 6 m options.
- Front and back side options.
- Unloading table can remove the cut tubes by taking out of cabin with its in-out movement.

For smaller parts than 800 mm, unloading table stays in outside and another small unloading system unloads the parts.

For longer parts than 800 mm, unloading table enters the cabin and unloads the parts.
